

QZ Solutions Sp. z o.o.

IT

QZ Solutions develops and tests software for various sectors, in addition to carrying out R&D projects on artificial intelligence and multispectral imaging for precise agriculture applications. By implementing state-of-the-art hardware and software technologies, our solutions can greatly enhance agricultural and other related processes. Examples include proper fertilising and irrigation processes, plant protection agent dosage and precise analysis of current field conditions. Since 2016, the company has been working on implementing the most groundbreaking technologies currently in development in the global agricultural industry. The benefits that follow are an opportunity to massively increase the productivity and efficiency of agriculture as a whole.
